

## Coding & Solution

|                      |                                                       |
|----------------------|-------------------------------------------------------|
| <b>Date</b>          | 29 September 2026                                     |
| <b>Team ID</b>       | SWTID-2026-4095                                       |
| <b>Project Name</b>  | Student Enrollment & Course Management System (SECMS) |
| <b>Maximum Marks</b> | 5 Marks                                               |

### Coding & Solution

SECMS is implemented as a declarative Salesforce configuration. The solution is built with Salesforce Lightning, custom objects, validation rules, an approval process, flows, reports, dashboards and security settings, rather than custom-coded source files.

### Solution Summary

| Field                         | Details                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Repository Link / URL         | To be added by the team (Salesforce Developer Edition org used for configuration; screenshots supplied in the Screenshots folder)                                                                                                                                                                                                                                                                                                                           |
| Programming Language(s)       | No custom programming language used; Salesforce declarative configuration (Flow, Validation Rule formulas, Reports)                                                                                                                                                                                                                                                                                                                                         |
| Framework(s) Used             | Salesforce Lightning Platform, Lightning App Builder, Salesforce Flow                                                                                                                                                                                                                                                                                                                                                                                       |
| Key Features Implemented      | Student, Course, Instructor and Enrollment objects; lookup relationships; tabs and Lightning App; New Enrollment and Re-Enrollment record types and page layouts; related lists; Student email and fees-paid validation rules; enrollment approval process; SetEnrollmentDate, Enrollment Approved Action, AutoAssign_Instructor and Create_Followup_Task flows; four reports; Student Management Dashboard; profiles, permission sets and sharing settings |
| Pending / Incomplete Features | Future scope only: payment gateway integration, student self-service portal, analytics-driven insights, mobile access support                                                                                                                                                                                                                                                                                                                               |
| Setup / Run Instructions      | Sign up for a Salesforce Developer account, activate it through the verification email, open Setup, create the objects, fields, relationships, tabs and Lightning App, then configure record types, validation rules, approval process, flows, reports, dashboard and security as documented in the Project Documentation folder.                                                                                                                           |

### Code Quality Checklist

| S.No | Criteria                                                                                                     | Status (Yes / No)                  |
|------|--------------------------------------------------------------------------------------------------------------|------------------------------------|
| 1    | Configuration is modular and organized (separate objects, flows, rules and reports)                          | Yes                                |
| 2    | Meaningful names are used (e.g. SetEnrollmentDate, AutoAssign_Instructor, Fees_Must_Be_Paid_Before_Approval) | Yes                                |
| 3    | Documentation is provided for each configuration step                                                        | Yes                                |
| 4    | Validation rules protect critical data (student email, fees paid before approval)                            | Yes                                |
| 5    | The application runs without critical errors in the Salesforce org                                           | Yes                                |
| 6    | Code is committed to a version control repository                                                            | To be added (no custom code files) |

### Additional Notes / Comments

- Validation rules: Student\_Email\_Domain\_Validation (student email condition) and Fees\_Must\_Be\_Paid\_Before\_Approval (blocks Approved status while Fees Paid is unchecked).

- Flows: SetEnrollmentDate, Enrollment Approved Action, AutoAssign\_Instructor (Technical, Language and Non-Technical categories) and Create\_Followup\_Task.
- Approval process: Approval\_Enrollment\_Request with entry criteria Enrollment Status = Requested; final approval sets Enrollment\_Status\_\_c to Approved.
